Description

Flow measurement via ultrasound.

Areas of use

Ultrasonic flow meters are ideal for measuring the flow rate. Thanks to ultrasonic measurement, they offer a precise, loss-free and calibration-free way to measure the volume flow. With a measuring range of 0–54 m³/h and the ability to handle up to 3% salt content in pool water, they are particularly suitable for monitoring and displaying the flow in pool systems. Speed-controlled pumps can thus be adjusted to the appropriate flow rate.

The FlowSonic+ can be used as a stand-alone solution, allowing manual evaluation and individual adjustment of the flow. The ability to make settings via the smartCONNECT app expands the application range of the FlowSonic+ and makes it flexible in use. The FlowSonic communicates with BADU Blue and BADU Blue Pro as well as other pool control systems capable of processing a digital (pulse) signal and an analog 4–20 mA signal.

Variants

Article number	Name
2716510002	BADU FlowSonic
2716520002	BADU FlowSonic+
